SAMURAI: DEMON GATE

1 Title + pitch

Samurai: Demon Gate. A lone samurai fights through a haunted village at dusk, survives a rain of bombs and slays the demon guarding the gate – a short, thumb-friendly 2D action platformer built for two-thumb play on a phone.

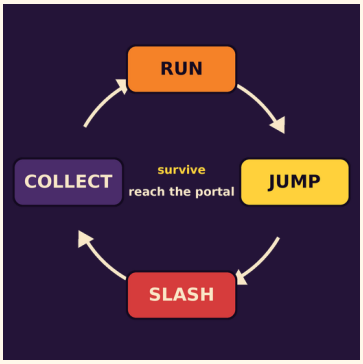

2 Genre · platform

Genre: 2D action platformer (run, jump, slash). **Platform:** Android first, iOS compatible. **Orientation:** landscape only. **Screens:** 16:9, 19.5:9 / 20:9 notch phones and 4:3 tablets – UI uses Canvas Scaler (Scale With Screen Size, 1920×1080, Match 1) and a SafeArea panel. **Session:** 3–5 minutes for a full run. **Tech:** Unity 6000.6, Input System, TextMeshPro, built-in 2D renderer, 60 FPS target.

3 2D or 3D

2D, pixel art. All characters are frame-by-frame sprite animations (hero, patrol samurai, demon boss), so no rig is needed.

4 Core loop

RUN → JUMP → SLASH → COLLECT, repeated until the portal opens.

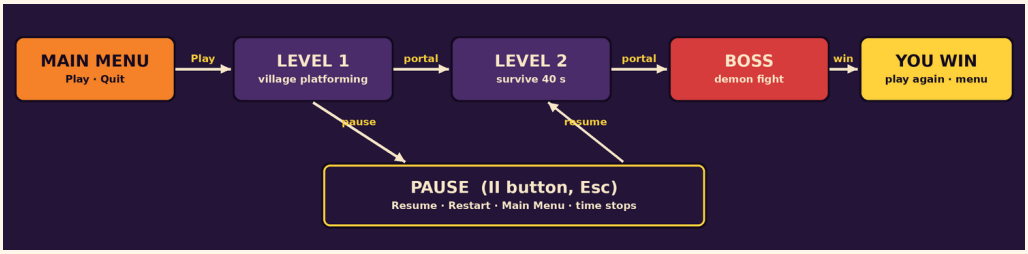

- **Run** along the village platforms toward the portal; enemies patrol and chase.
- **Jump** gaps, moving platforms and falling bombs.
- **Slash** samurai (1 hit) and the demon (10 hits) – the sword has a cooldown, so timing matters.
- **Collect** coins (score) and hearts (+1 HP, they vanish after 5 s) dropped by defeated enemies.
- Lose all 3 hearts and the level restarts; reach the portal to move on.

5 Controls

Control	Where	Size (ref. 1920×1080)	What it does
Move stick	bottom-left corner	360 px base, 160 px knob	Run left / right (dead zone, analog speed)
Jump	bottom-right corner	208 px	Jump when standing on ground
Attack	left of Jump	176 px	Sword slash with cooldown; hits enemies / boss
Pause (II)	top-right corner	160 px	Opens Pause: time stops (Time.timeScale = 0)
Resume / Restart / Main Menu	centre of Pause window	580 × 150 px	Continue · reload the level · back to the menu
Play / Quit	centre of Main Menu	640 × 160 px	Start Level 1 · exit the game

HUD (top): 3 hearts (left), SCORE with coin icon (centre), level name below it, boss health bar replaces it in the boss fight. All text is 36+ px with a dark outline; every button is at least 120×120 px. PC testing: Esc / P = pause, keyboard controls still work.

Screen flow

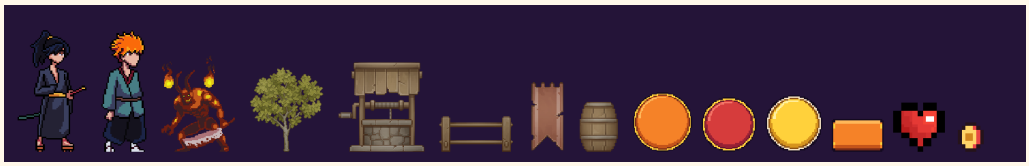

6 Content

- **3 levels:** Level 1 – village platforming with patrol samurai and a moving platform; Level 2 – survive 40 s of falling bombs, then the portal opens; Level 3 – boss fight.
- **Enemies:** 1 patrol/chase samurai (1 HP, drops 3 coins + 40 % chance of a heart) and 1 boss – the demon (10 HP, sword cleave with a red warning zone, fireballs, a faster enraged phase).
- **Hazards:** bombs (5 s fuse, 1.5 radius), pits (kill zone), 1.5 s invulnerability after a hit.
- **Items:** coins (score), hearts (+1 HP), portal. **Screens:** Main Menu, HUD, Pause, Win.

7 Art and sound

One world, dusk palette: deep purple sky, orange horizon, gold trim, dark-ink outlines on everything. Pixel art, Point filtering, no blur.

Sources: hero, enemy and demon sprites – from my midterm project (pack credits in README); ground tiles and village props – Pixel Art Platformer – Village Props by Cainos (terrain is assembled from its ground tileset, props decorate platforms); UI kit (buttons, panels, icons, joystick) – pixel art drawn to the same palette; heart and coin – from my own game art. Music and SFX – from the midterm project, credits in README (menu, level and boss themes; click, jump, hit, coins, explosion, roar, portal, win).

8 MVP (week-15 build)

- Main Menu → 3 playable levels → Win screen, start to finish, on an Android phone at 60 FPS.
- Touch controls (stick, Jump, Attack), HUD with hearts and score, Pause with Resume / Restart / Menu; UI correct on 16:9, notch phone and 4:3 tablet.
- Patrol enemy and demon boss with readable telegraphs; coins and hearts; portal flow between levels.
- Saved best score and progress; music + SFX with a mute toggle; hit effects (sparks, screen shake).

9 Cut list (NOT making)

- Multiplayer, leaderboards and online accounts.
- Shop, in-app purchases, ads, daily rewards.
- Extra heroes / skins, equipment and levelling.
- Story cutscenes and dialogue; localisation beyond English.
- Procedural levels and a level editor; gamepad button remapping.
- More than 3 levels – extra content only if the MVP is stable.

10 Plan, weeks 9–13

Week	Ready at the end of the week
9	GDD, GitHub repo, Menu / HUD / Pause on three devices, touch controls, restyled world (this assignment)
10	Enemy AI: patrol → chase → attack states, hit reactions, tuned boss phases
11	Saving: best score, last unlocked level (PlayerPrefs / JSON), Continue button
12	Sound: audio mixer, music / SFX volume and mute toggle in Pause, UI sounds
13	Effects and polish: particles, screen shake, hit-stop; first Android build and balance pass
14–15	Teams form; bug fixing; MVP build ready for the defense

Roles: solo developer until week 14 – design, programming, UI, art integration, testing.
